Friday 22 May 2020 Morning Time allowed: 2 hours

Materials
- You must have the AQA formulae and statistical tables booklet for A-level Mathematics and A-level Further Mathematics.
- You should have a scientific calculator that meets the requirements of the specification. (You may use a graphical calculator.)

Instructions
- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you require extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do **not** write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information
- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

Advice
- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

3 The quadratic equation $ax^2 + bx + c = 0$ $(a, b, c \in \mathbb{R})$ has real roots α and β.

One of the four statements below is incorrect.

Which statement is **incorrect**?

Tick (✓) **one** box.

[1 mark]

$c = 0 \Rightarrow \alpha = 0$ or $\beta = 0$ ☐

$c = a \Rightarrow \alpha$ is the reciprocal of β ☐

$b < 0$ and $c < 0 \Rightarrow \alpha > 0$ and $\beta > 0$ ☐

$b = 0 \Rightarrow \alpha = -\beta$ ☐
