

## Supported Beams

### Starter

1. (Review of last lesson)

A uniform ladder of mass 25 kg and length 9 m rest with one end on rough, horizontal ground and the other end against a smooth, vertical wall. the ladder makes an angle of  $68^\circ$  with the horizontal, as shown. A window cleaner of mass 76 kg stands two-thirds of the way up the ladder, and the ladder is in equilibrium. Find the range of possible values of the coefficient of friction between the ground and the ladder.

**Working:**

$F_{limG} = \mu R_G$  so we need to find  $F_{limG}$  and  $R_G$ .

$\curvearrowright$  about  $R_G$ :

$$\frac{25g \cos 68 \times 4.5 + 76g \cos 68 \times 6}{\sin 68 \times 9} = R_W$$

$$R_W = 250.1\dots$$

$R(\rightarrow)$ :  $F_{limG} = R_W = 250.1\dots\text{N}$

$R(\uparrow)$ :  $R_G = 25g + 76g = 101g\text{ N}$

$$F_{lim} = \mu R:$$

$$\mu = \frac{F_{limG}}{R_G}$$

$$\mu = \frac{250.1\dots}{101g}$$

$$\mu \approx 0.253$$

The coefficient of friction must be greater than or equal to 0.253 (3 s.f.).

**E.g. 1** A uniform rod,  $AB$ , of length 3.3 m and weight and 10 N, rests with  $A$  on rough horizontal ground.

The rod is supported by a smooth peg at  $C$ , where  $AC = 2.4$  m, in such a way that the rod makes an angle of  $28^\circ$  with the ground.

A particle of weight 25 N is placed at  $B$ .

Given that the rod is in limiting equilibrium, find

- the magnitude of the normal reaction,  $R_P$ , at the peg and
- the frictional force,  $F_{lim}$ , between the rod and the ground.

**Working:**

(a)  $\curvearrowright$  about  $A$ :  $2.4R_P = (25 \cos 28 \times 3.3) + (10 \cos 28 \times 1.65)$   
 $R_P = 36.4\text{ N (3 s.f.)}$

(b)  $R(\rightarrow)$ :  $F_{lim} = R_P \sin 28 = 17.1\text{ N (3 s.f.)}$

**E.g. 2** A uniform beam,  $AB$ , of mass  $1.6 \text{ kg}$  and the length  $1.5 \text{ m}$ , rests with  $A$  on rough, horizontal ground. The beam is supported by a smooth peg at  $C$ , where  $AC = 1.1 \text{ m}$ , so that it makes an angle of  $20^\circ$  with the horizontal, as shown.

The beam is on the point of slipping.

Find:

- the magnitude of the normal reaction of the peg on the beam,
- the magnitude of the normal reaction of the ground on the beam,
- the magnitude of the frictional force between the ground and the beam,
- the coefficient of friction between the ground and the beam.

**Hint:** draw a diagram with all the forces on.

**Working:** (a)  $\curvearrowright$  about  $A$ :  $1.1R_P = 1.6g \cos 20 \times 0.75$   
 $R_P \approx 10.0 \text{ N}$

The magnitude of the normal reaction of the peg on the beam is  $10.0 \text{ N}$  (3 s.f.)

(b)  $R(\uparrow)$ :  
 $R_G + R_P \cos 20 = 1.6g$   
 $R_G = 1.6g - 10.0 \dots \cos 20$   
 $R_G \approx 6.24 \text{ N}$

The magnitude of the normal reaction of the ground on the beam is  $6.24 \text{ N}$  (3 s.f.)

(c)  $R(\rightarrow)$ :  
 $F_{lim} = R_P \sin 20$   
 $F_{lim} = 10.0 \dots \sin 20$   
 $F_{lim} \approx 3.44 \text{ N}$

The magnitude of the frictional force between the ground and the beam is  $3.44 \text{ N}$  (3 s.f.)

(d)  $F_{lim} = \mu R$ :  
 $\mu = \frac{F_{lim}}{R_G}$   
 $\mu = \frac{3.44 \dots}{6.24 \dots}$   
 $\mu \approx 0.551$

The coefficient of friction between the ground and the beam is  $0.551$  (3 s.f.)

**N.B.**  $10.0 \dots$  indicates that the calculator value is used in the calculation.

**Exercise**

1. A uniform beam,  $AB$ , of weight  $50\text{ N}$  and length  $2\text{ m}$ , rests with  $A$  on rough, horizontal ground, as shown. The beam is supported at an angle of  $35^\circ$  to the ground by a smooth peg at  $C$ , where  $AC = 1.4\text{ m}$ . A horizontal force of magnitude  $10\text{ N}$  is applied to the beam at  $B$ . Find the range of values of the coefficient of friction between the ground and the beam for which the beam will remain in equilibrium.

2. A uniform beam,  $AC$ , of mass  $14\text{ kg}$  and length  $15\text{ m}$ , rests with  $A$  on rough, horizontal ground. The beam is supported by a smooth peg at  $C$ , where  $AC = 13\text{ m}$ , so that it makes an angle of  $18^\circ$  with the horizontal, as shown. The beam is on the point of slipping. Find the coefficient of friction between the ground and the beam at  $A$ .

3. A uniform beam,  $AB$ , of weight  $W\text{ N}$  rests in limiting equilibrium at an angle of  $30^\circ$  to the horizontal on a rough peg at  $A$  and a smooth peg at  $C$ , where  $AC = 0.75AB$ . The reaction forces at  $A$  and  $C$  are both perpendicular to the beam. Find the coefficient of friction between the peg and the beam at  $A$ .

4. A uniform beam  $AB$  of weight  $12\text{ N}$  and the length  $5\text{ m}$  rests on a smooth surface at  $A$  and a rough peg at  $C$ ,  $4\text{ m}$  from  $A$ . The beam makes an angle of  $40^\circ$  with the horizontal, as shown. Given that the beam is in equilibrium, find the range of possible values of the coefficient of friction between the beam and the peg.

**Answers to exercise**

1.  $\mu \geq 0.59$
2.  $\mu = 0.35$
3.  $\mu = 1.73$
4.  $\mu \geq 0.84$
