Monday 13 May 2019 Afternoon Time allowed: 1 hour 30 minutes

Materials
- You must have the AQA formulae and statistical tables booklet for A-level Mathematics and A-level Further Mathematics.
- You should have a scientific calculator that meets the requirements of the specification. (You may use a graphical calculator.)

Instructions
- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you require extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do **not** write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information
- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

Advice
- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

9 (a) Saul is solving the equation

$$2\cosh x + \sinh^2 x = 1$$

He writes his steps as follows:

$$2\cosh x + \sinh^2 x = 1$$

$$2\cosh x + 1 - \cosh^2 x = 1$$

$$2\cosh x - \cosh^2 x = 0$$

$$\cosh x \neq 0 \ \therefore \ 2 - \cosh x = 0$$

$$\cosh x = 2$$

$$x = \pm \cosh^{-1}(2)$$

Identify and explain the error in Saul's method.
